Welcome to the interview task

If something is not clear or you need help please ask[1].

Summary

Create an application that displays the current weather information for Berlin and Waltham on a webpage.

Steps

1. Read the task.
2. Download the Git repository from http://tinyurl.com/care-com-dev-challenge.
3. Create a project.
4. Please implement the features explained below according to your own best standards.
5. Provide an overview of improvements for future development on this project.

Feature requirements

Use the API of Open Weathermap (http://openweathermap.org/current).

Render a HTML page with weather information presented for Berlin and Waltham.

Bonus task

Create a form to input the name of a city for which the weather will be fetched and displayed.

Important

The way you solve this task is up to you. You think persistence is worthwhile, do not hesitate to use it! You like a fancy UI with some images? Or just text? Show us what you got! You want to show off testing skills, be our guest!

Please use the Git repository provided to work in and commit your code to.

Please do not work more than **2-3 hours** on the task.

When you are finished, please send the Git repository to marc.schuba@care.com.
